Mozilla Firefox Support unleashes the potential of the World Wide Web by Kellymarion

Article published on December 14th 2011 | Computer

If you love the web, spend time online passionately or it has become an inseparable part of your personal and/or professional life then Mozilla Firefox is worth installing. It explores the new world, and offers an elegant way to access and share data using the latest of the web technologies such as Gecko (layout engine that reads web content, such as HTML, CSS, XUL, and JavaScript and renders it on a user's screen), Necko-a network library that provides a platform-independent API for several layers of networking, ranging from transport to presentation layers, NSPR which provides a platform-neutral API for system level and libc-like functions, NSS i.e. Network Security Services (NSS) a set of libraries designed to support cross-platform development of security-enabled client and server applications, and more. Recently Firefox has added Twitter as a search option in Firefox for Windows, Mac and Linux, which will make it easier to discover new topics, the search is currently available in English, Portuguese, Slovenian and Japanese versions of Firefox, with more languages to come in future releases. In the new version 8.0.1 it has fixed previous issues related to the crashing of Mac OS X and Windows startup crash caused by RoboForm versions older than 7.6.2.

Despite all, issues pertaining to the installation, update and upgrade are common. There can be compatibility issues with the Google Toolbar, Add-ons and more. Post-installation problems related to the pop-up, unwanted add-on installation, accessibility of the Internet, e-mail and web-based applications can baffle you a lot. Stability and security issues may also crop up. Mozilla Firefox Support is a devoted portal to handle all such problems, and is available at the comfort of your home or office over the Internet or via phone.

No matter, Mozilla Firefox Technical Support service holds great expertise and is feasible anywhere but knowing a few troubleshooting and maintenance tips can be an edge. Letâ€™s have a glimpse:

Firefox crashes

Though Firefox automatically updates itself but you can check it manually and it can fix the crashing issues. You can configure for the â€œautomatic updateâ€• to let thing run in the background. You must update your plugins, Windows, drivers and Internet Security software. Perform a security scan to check for viruses or spyware. If you are not reaching the crux and experiencing the problem even in Safe-Mode then seek online Support for Mozilla Firefox.

Error loading web sites

Try to understand the cause behind. If the problem only happens with certain websites then possibly the Firefox's cookies and cache are responsible and it will be displayed as: â€œThe connection was interruptedâ€•, â€œThe connection was resetâ€•, â€œThe connection has timed outâ€•. Immediately cle form the â€œFirefox Historyâ€•.

However, if your website loads but doesn't work properly or look right, images or animations do not show or video or audio does not play or Firefox never finishes loading certain websites, and you are getting errors like: â€œSecure Connection Failedâ€•, â€œError code 500 accessing secure sitesâ€• or â initialize the browser security componentâ€•. Check your web-address starts if it starts with https:// (notice the "s") then check SSL settings, proxy settings and security software. However, if it happens with other sites then turn off hardware acceleration and update or disable all extensions.

The Adobe Flash plugin has crashed

The error message shows when Flash plugin stops working unexpectedly. You need to uninstall the outdated Flash Plugin and replace it with the latest version.
