Integrate and Customize Open Source Applications for a Robust Solution by Rakhi Chowdhary

Article published on April 25th 2012 | Web Design

The technological advancements have brought many changes to the business world. The businesses that were totally dependent on brick and mortar businesses are switching to online businesses to cater a wider market. Whether it is a small-scale business or a big enterprise, they want to have a good online presence so as to build credibility in the industry.

The sudden need of designing and developing websites has increased the scope of different web and software technologies. There are different open source technologies that donâ€™t require any license for using it for development purposes. Some of these technologies are Joomla, Drupal, Wordpress, Zencart, OScommerce, PHP, Ruby, Ajax etc. All these technologies are helpful in publishing and managing content, adding videos and images to the website.

The open source applications are widely used as it allows users to develop a solution by providing a chance to use functionalities in a more appropriate manner. The web developers can easily edit the source code to make the changes in real time. Whether you desire to create a blog, set up an e-store or develop a complex dynamic site, the open source developers can make it possible by using open source application (OSA) integration and customization services.

Many open source development companies have started providing OSA integration and customization solutions to help clients make the best out of the technology. The developers can make modifications to the solution by integrating the functionalities of another technology into the solution. Therefore, they consider gathering clientsâ€™ requirements in advance so to design a solution that can have the features of one or more OSA.

The open source development firms offer variety of solutions ranging from hosting, template customization, extension customization as well as third-party integration services. It all depends on the client whether it wants to take OSA integration solutions, OSA customization solutions or both OSA integration and customization services.

Are you also in search of a company that can help you develop a robust and scalable open source application solution? You can use Internet to search for open source development service provider that can provide you out of the box solutions within your budget. While making a selection, you must check their portfolio to check their capabilities and skills in developing an OSA solution. Once you are sure that they are capable enough to work for your company, you can get a NDA deal signed by them for keeping your company information secure.
