Gabriel Shocks: Created for the Protection of Your Vehicle! by [Sylvia Lambert](#)

Article published on April 24th 2012 | [Business](#)

The biggest variations of these vehicles are apparent in their suspensions. This is what Gabriel Shocks has kept in mind while creating their LTV shocks which are custom made to handle the demands of particular fleets, regardless of whether they are light or heavy. The primary aim of Gabriel shocks is to provide you with unmatched stability and response from their products.

Gabriel shocks are at their bases packed with an oversized 1 5/8 inch piston bore, which is installed to provide maximum strength and stability designed to withstand and settle even the most forceful bumps, shakes, rolls and rattles. This is possible because the sintered iron piston and the compression head are both designed with scientific precision to deal with even the most extreme conditions while maintaining quality performance and control.

Gabriel shocks all have a tough and gritty exterior due to the 360 degree arc that is welded directly at the end of the mount to provide extra structural strength to the shocks. All of Gabriel shocks are custom-sized so that they can directly replace the shocks you had in stock after they wear out. . It also has a pressurized piston ring which is made from metal along with a ten stage valve enhanced handling. All of these features come with the ultimate ride comfort and still provide room for the independent adjustment of damping.

The biggest distinguishing factor for Gabriel shocks from Truck Help is that every shock each of their product lines has a super-finished chromed piston rod which allows you to preserve the product for a long time as it prevents corrosion, is durable and long-lasting.

As any vehicle owner would know, performance, comfort, dependability and control are the essential components of any business, which is Gabriel shocks should be anyone's first choice when it comes to installing shocks within your vehicles to ensure that you are subjected to the least amount of damage due to impact from rough roads, shakes and bumps.

The piston seal design for Gabriel shocks, especially for their LTV product line is custom made to reduce force-velocity variation, which self compensates to reduce wear and tear on the vehicle. Gabriel shocks have been created to protect your vehicle to the best of their ability which enables you to save a lot of money on repairs because of damages caused by impact on bad roads.
