With gasoline costs reaching all-new highs, sometimes you just want to trade your auto for an electric golf cart and drive around Ontario with it. At least with the golf cart, you are ready to go; because all you have to do is plug it in for a few hours before driving. Too bad it's just a pipe dream.

But wait, it's in fact not. The Mitsubishi i-MiEV is a fully electric powered auto that functions like an electric golf cart, only with a lot more style. The world practically scrapped the concept of driving electric cars in the nineties, but in the past few years, this specific niche market has actually demonstrated a ton of promise. Leading the pack of reborn electric powered autos is the Mitsubishi i-MiEV, the most wallet-friendly electric powered car, and arguably one of those that possesses the most trustworthy performance.

Engine and Performance

The most recent design of the i-MiEV had a 49KW motor with 66HP, and had the ability to place out around 145 pound-feet of torque. Mitsubishi gauges that the i-MiEV has a driving span of approximately 62 miles per charge. It also received an energy-efficiency score of 126 mpg in the city and 99 mpg on the highway.

Interiors

Burlington residents that are pretty tall do not have anything to bother with either--the i-MiEV has adequate headroom even for Yao Ming. By having the rear seats folded, the i-MiEV further delivers a respectable freight capacity of 50.4 cubic ft. The straightforward style of this make will certainly attract most drivers, though it still has all the standard features you'd will get in many automobiles of its family.

Drive Settings

i-MiEV styles Burlington Mitsubishi providers can sell you possess three drive trims. The "Eco" drive trim is like the "Energy Saver" feature on a laptop, while "B" increases the effects of regenerative braking to conserve the battery. The "D" setting offers a driving experience a lot like that of a normal automobile.

Driving Impression

Companies of Mitsubishi Burlington Ontario citizens go to will typically let you test-drive their automobiles. While test-driving the i-MiEV, you're going to notice just how alike it is to driving a gas-only subcompact. The cabin is quiet except for the whirr of the electric motor, and the vehicle achieves a respectable top speed of 81 miles per hour.

The electric motor might be a bit confusing though, so if you're having any types of complications with the vehicle, you must take it to Burlington auto service centers and let the specialists attend to it. The i-MiEV is the car of the future, and you can acquire it now. For more details, check out edmunds.com/mitsubishi/i-miev/2012/.
