A Detailed Analysis of the PayPal Recurring Payments by [James Blee](#)

Article published on April 17th 2012 | [Customer Service](#)

A PayPal recurring payment is nothing but the transaction of money from one PayPal account to another and which is done periodically. The said amount can be modified by either of the client or the trader and can be discarded to by any one of them. The only requirement is that the client should be the holder of a valid credit card.

PayPal is the most economical way of undergoing online transaction. It is confirmed by the survey consisting of the various merchant accounts. If a customer buys something more than he originally does, that amount can be easily added at the end of the month along with a fee to be paid. The client need not worry about the time deadline to pay them or use their cheques. Thus, your business will never get stuck for financial problems. Clients can buy as much they want within a stipulated period and can pay at the end of the period via that PayPal recurring payments.

Before the beginning of the monthly support service, the client is served with a PayPal button attached in an e-mail. This button will help you to open your own PayPal account. It is very simple and easy to create the account. After your new account is created, you should enter your credit card details. The recurring payments at the end of the month or other designated period will be processed with the help of this credit card.

The necessity of a credit card for the recurring payments is high as the entire transactions will be done via this card. The whole process remains curtailed in absence of the card. Thus before the process starts, if you do not possess a credit card of your own, you need to get one as soon as possible. The advantages provided by the PayPal account are the safety of transaction along with the protection from revealing all your personal documents.
