Live with choice and not fate – get beautiful skin whenever you want! [By rdsonsmith](#)

Article published on August 21st 2012 | [Health](#)

The new ingredient stealing the limelight these days is Hyaluronic Acid. The best anti wrinkle solutions claim to have it. The cosmetic world is crazy about this anti aging ingredient.

Let's see why!

This compound is present in the body as complex sugar. You can find it in connective tissues, joint fluids, eyes, heart, spinal discs, and the skin. It supplies nutrients to cells and removes toxins. It acts as a cushion for organs, as a lubricator for joints, and a great water retainer for skin tissues.

Your skin is like a sponge

Imagine your dermis as a sheet of sponge. The solid portion of the sponge is collagen and elastin that create the supporting structure of your skin. Spaces or pores of the sponge are where Hyaluronic Acid, one of the key Hydroxatone ingredients, is present. This plumps up the sponge sheet.

You can pretty well imagine what will happen when this acid becomes deficient. The sponge structure will start to crumble or wither. Now you realize why this acid is crucial to maintain your skin's youth. Its low level withers away the skin and wrinkles it.

Making the most of this great water holder

The cosmetic world has acted on time and used this important complex compound in their formulation to increase the effectiveness of their anti aging cream. The acid has the power to rebuild the skin's structure. It can plump up the cells and "fill up" the wrinkles on the surface.

The acid has excellent affinity for water. It can hold 1000 times its own weight in water. So it is obvious that a good level of this acid in the skin will keep it hydrated and healthy.

However, molecules of this acid are big. The best anti wrinkle solutions have this acid in micronized form so that they can penetrate well into the dermis and work effectively.

You must be wary of OTC creams that claim to contain this acid. Are you sure they have micronized the acid molecules to make them small enough to enter the skin pores? Most of the OTC products are not clinically tested. So, chances are high that manufacturers may not have considered the scientific aspects of aging and skin structure.

Only the best brands deploying researchers and scientists to create anti aging formulas can create effective products. They study the skin and the aging process and then come up with creams that work not as cosmetics, but more as skin medications.

It's because of this consideration that brands have been able to use Hyaluronic acid as one of the ingredients of their creams. Today, a cream not containing this acid becomes the subject of doubt. You can get free Hydroxatone trial cream containing this acid. This formula is created by a plastic surgeon and was launched in the market in limited edition. However, the immense demand compelled the brand to continue its supply of creams.

The top anti wrinkle solutions have, no doubt, given women moments of radiant beauty and

liberation. It has made wrinkles a choiceâ€”you can either live with them (yes, many women do and gracefully too), or use an anti aging formula and remove them.
