What Makes a Butt Gorgeous: Experts Point out Size and Shape Matter by [Terry Bayer](#)

Article published on May 1st 2012 | [Health](#)

Enabling you to have a seat, making you appear alluring (femme-wise), and breaking your fall when somebody takes your chair away when you are getting ready to take a seat are the things they do. These are recognized together as the "butt," which is made up of the gluteus muscles: gluteus maximus muscle, gluteus medius muscle, and gluteus minimus muscle. Like the other parts of the body, it's also a spot plastic surgery touches.

The Brazilian butt lift is carried out to make the buttocks seem bigger to achieve a curvaceous figure by drawing fat from other body parts, normally working with liposuction, and infusing it into the butt. Even though women and men alike are qualified for a Brazilian butt lift, most who undergo this procedure - nine out of 10 - states the American Society of Plastic Surgeons (ASPS), are females. What exactly are their motives for obtaining a butt lift?

The "bomb": The men like women with well-formed figures and full-size butts, period. It's a rather recognizable scene in popular culture (fiction, general fiction, movies): girls who sport large breasts and butts are the apples of the men's eyes. Andrew Clark of Bristol University stated that large butts have been desired over the course of history, even during the Renaissance period.

Then again, Clark also adds that for any butt to be considered eye-catching it must not only be large, it should be well-built too. In his piece published on The Sun in 2009, he referred to actress and singer Jennifer Lopez as an example. His analysis of the celebrity's pictures during the latter's vacation in Italy reinforces the idea that shape is an important factor, whether for small or big buttocks.

The fad: In many parts of the world, together with the U.S., big buttocks are a typical sight. Clark states large buttocks are a common trend in Europe, the U.K., and the Americas; although not usually in East Asia where people's buttocks are smaller. Expect stars like Beyonce and Kelly Brook to show there is certainly nothing to be embarrassed about in having a large buttocks. As a matter of fact, together with Botox, Brazilian butt lift has witnessed its share of popularity.

The butt lift is taking virtually every state in the U.S. by storm, just like the Botox Los Angeles has to offer. Data from the ASPS revealed that patients spent around \$13 million in butt lifts in 2009 alone. With large butts trending as of today, patients undergoing butt lifts could rise in the coming years.

Read more about Clark's study on "rear-lativity" at The Sun online at TheSun.co.uk. Likewise, go to YourGuidetoPlasticSurgery.com for more facts on cosmetic surgery procedures like Los Angeles Botox and butt lifts.
