Domain Parking by [Rrdnetin](#)

Article published on June 26th 2012 | [Internet](#)

www.rrd.net.in is amongst the leading firms that work in the field of creating web presence of companies and organizations. Domain parking is a service that allows you to “park”™ your domain in World Wide Web for later development and redirection of web traffic.

Under this service, you can park your domain name without placing any content on it. In this case, your domain includes a page which shows your message like coming soon, under construction or any other message chosen by you. www.rrd.net.in provides this service free of cost whether your domain was registered by the firm or not. You can park your domain for as many years as you want though you need to renew this service every year. With rrd.net.in, you can renew your domain parking service easily by sending a request to the team.

In case, you already have a successful site, this service allows you to secure addresses similar to your own so that later you can redirect the traffic of that site to your own website. For instance, if your website address is www.abc.com, you can register and park similar addresses like www.abc.net or www.abc.biz.in depending your preference and availability of domain. Later, you can use these domains for redirection of traffic. When people enter your second domain, they will automatically be redirected to your website. This would ensure more traffic to your website. Your second domain does not remain parked when you start using it for redirection of

web traffic.
