Is WordPress a good CMS for website development? by [Mark Wilston](#)

Article published on March 16th 2012 | [Web Design](#)

Content management systems can be accredited for contributing a great deal towards the entire world of website development. The effective technologies make it really easy for the users to develop the website and effortlessly manage the same. One of the worth mentioning open source CMS for website development is WordPress. In the article, we shall discuss the various attributes of WordPress CMS, which actually makes it a great CMS for developing websites.

Easy and effective

While developing a website, this is perhaps the biggest attribute one would look for. WordPress development is very easy to deal with and work on. In fact it is the simplicity of WordPress CMS which has made it so very popular amongst the users. WordPress Development is easy to deal with. Its admin panel is very easy to understand and as oppose to various other open sources like Drupal etc, the admin section of WordPress is not at all intimidating. Besides, WordPress is very much web optimized. All the major search engine crawlers adore WordPress CMS, hence you gain the in built benefit of search engine optimization. Along with this, various WordPress plugins are available which perform a particular task and can be used any time.

WordPress development is highly easy to use

This is yet another feather in the cap of WordPress development. Even from the development point of view, WordPress development is very easy. WordPress provides the WordPress developers with the option of WordPress Widgets. These widgets are simple drag and drop options which allow the developers to select a particular item, drag it in the CMS web design and upgrade the same. This makes it easier for the website owners to update the website later on with any new piece of content item etc.

Simplicity with scalability

Yes, the WordPress CMS is simple, but at the same time it is very much scalable as well. Scalability of the website is an attribute which makes it grow with the changing needs of time. What really makes WordPress a highly scalable CMS is that it strictly follows the plugin architecture. With the help of proper plugin, the scope and functionality of the WordPress CMS can be increased manifolds.

There are over 17 thousand WordPress plug ins available, hence you can only imagine the extent of scalability offered by WordPress CMS. The plug ins can be installed from the official websites, or you can also hire WordPress developers to assemble the best plug ins as per the requirements of your websites.

Ecommerce website development with WordPress

WordPress website development has not remained a simple blogging platform and simple website development solution. The release of WordPress version 3 has unleashed the world of WordPress users with amazing and fully functional tools for shopping cart integration and developing ecommerce portals. The ecommerce websites are very popular with the users these days and every one prefer buying online instead of stepping out of the comfort zone and go to the physical store. With the help of ecommerce integration in the WordPress powered website, the same can be achieved, effortlessly.
