3 Major Categories of Boat Electrical System by [PY System](#)

Article published on April 11th 2012 | [Boating](#)

There are several components on the boat that you cannot properly take care of by yourself and therefore, you should hire an expert to keep your boat in best shape. The components that you cannot take care of essentially include the electrical system.

Boat electrical system can be divided in several categories. Lighting, fuel management and communication are the major three categories. A general lighting system is must for any boat. Similarly, there should be a well maintained fuel maintenance system. In today's world almost all the communication system is based on electronics and therefore there is no need to mention it separately.

General Lighting

There are several parts in the boat that are not properly lit. In the daytime, on fine day, you can move across easily without touching any loose wire. But in the night and when it is dark, you can only rely on the general lighting system of the boat. The LED lights that act as a visual signal for other boats are also a part of this general lighting system. This is very important for the engine room. Generally the engine rooms are dark and compact; therefore, in absence of a lighting system you might face severe difficulty in rectifying any urgent problem.

Fuel Management

Though it is not directly related to electrical and electronics of the boat. Still you find several boat components that are utilized to manage the fuel. Some of the equipment are a core part of boat electric system and helps you manage the fuel consumption of the boat. These components optimize the use of the fuel and hence maintain the efficiency level of your boat.

Communication system

Boat electrical system constitutes the communication system. When in a boat, you are alone and aloof from the world and hence there should be a strong communication system to keep you connected with the rest of the world. There are several equipments like, GPS, RADAR and chart plotter that makes the list of boat components that are used for the purpose of communication.

The boat electrical system should be properly taken care of. Not only the connectivity of the devices as well as proper care of loose wires are required; you should also hire an expert who can assist you in proper supply. Even if you do have best of components but not sufficient power supply, then it is of no use. Therefore, it is imperative that you maintain adequate power supply on your boat.
