Office telephone systems can be a few telephones connected with each other and to the world through a device that is called the PABX or the Public Automatic Branching Exchange or thousands of lines of a large office that are in continual communication with each other and the rest of the world.

Small business telephone systems could possibly be multiline systems in the offices of the small businesses. While it all began with the telephone operator manning the device which could control the connections between any two lines and connecting the office lines with the outside world with a telephone at that end, it has become more sophisticated now with new office telephone systems device taking up much of the manual functions of the telephone operator.

Just a few years ago, office phone systems in a small setup were simple PBX systems. These systems (PBX or public branching exchanges) usually consisted of switches connecting to extensions lines.

Current technology offers more sophisticated and dynamic options available to customers.

To get the best option for small business telephone systems, it is very important to understand the complete requirement. Finding the objective and scope of the new telephone system needed in the office environment. Best solutions then can be found for the particular case. It is reasonable to mention here that each office of a small or big business has its own specific need that needs to be addressed to find the best option. Hence, it is a good idea to take the help of a professional telecom company who can put together a customized solution for you. These professional telecom solutions companies work with telephone companies and specialized software developing companies to custom manufacture the most appropriate solution for your office telephone systems needs. Thus a customized solution can be found which is cost effective in a specified time frame that is acceptable to you and the provider of this service.

There are also ready-made solutions for small business telephone systems that can be studied to find if they suit your need. These solutions may be cheaper than the customized ones and if majority of your requirements are fulfilled by these ready to install systems then it could be a better idea to go for them.

The modern small business telephone systems are not just the telephone network within the office environment with a PABX or even the latest VoIP systems in place. Many more facilities can now be incorporated in the office telephone systems that take off the burden from a lot of office staff. A wide variety of devices, resources, applications and low-cost lines are added to the basic office telephone systems to make them work hard for your business.
