CNG Travels from Alternative to Preferred Fuel by [Chris Adam](#)

Article published on June 6th 2012 | [Business](#)

From alternative fuel, the CNG has come a long way to become a preferred fuel now. The reason for this change is nothing sensational in nature, but simple fact that the compressed natural gas is clean, inexpensive and available in huge quantity. On the contrary, oil-run cars do pollute the air, are mighty expensive and many an oil wells have dried up. Oil wells are mostly found in the Arab nations and it depends on the relationship a particular nation is having with the Arabs, for the oil supply and the rates fixed for oil. With so many odds stacked against petrol-run cars, it is always the CNG that gains volume over the former. The compressed natural gas is a big option to be considered seriously in the fight against climate change. It being a clean fuel, the life of the engine too is extended and thus the maintenance too is reduced sharply in comparison to the petrol-runs cars.

However, the petrol-run cars are better performing than the CNG-runs, when it comes to speed and performance. Though it is not a huge gap but still cng might not be an option for speed gun breakers.

One thing that needs to be taken care of is the CNG conversion kits. It should always be brought from an authorized dealer and done by qualified technicians only.

It is highly recommended to avoid the temptation of fancy offers doled out by unauthorized dealers and get the conversion kit fitted the legal way. Anyhow, a lot of money will be save this way, since you will no longer be shelling out on oil, so no compromise should be done on the CNG conversion kits.
