Broken zipper may be a cause of insult many a time. When you are on your way to attend a party or a business meeting opened zippers leave bad impressions. The need in this case is get the zipper fixed instantly so as to be an ideal person. The question however is How to repair a broken zipper effectively so that it last long. For people willing to know about the technique of fixing problems in zipper they may turn up each to their tailor to get it fixed. However there are many ways through which it can be fixed right at home. Going thought the forthcoming lines you would be able to fix the zipper in an effective manner.

First of all do observe as to what kind of problem has occurred in the zipper. Look at it and if you observe that one side of zipper still has the slider then you need to move the zipper to the "up" side and "down" side frequently. It is very easy to perform you do it everyday and if there has been any imbalance in the teeth placements it can be fixed instantly. However if doesn't work take a pair of scissors is used for making cut in between the sliders. The cut is made up to the bottom of the zipper in between the teeth of the zipper. Once it is done the free side of zipper is feed into the topmost end of slider where the cut has been made. The slider is moved to the upside until it cannot be moved further. Now when both of the sides have been placed face to face their teeth are matched head to head and with this they can firmly attached followed by running slider.

Yet another fantastic way of fixing broken zippers is that you can stop it from getting unzipped. In this a button can be sewed at the top position of your zipper and an elastic hoop is fastened to the zipper. Many a times it happens that your zipper has no any problem yet it is not working properly this may be due to extra hardness or rust in the teeth of the zipper. You can remove such rusts or hardness by applying a strip of wax on the zipper's teeth. It smoothens the slider way and teeth are zipped firmly when slider attaches them head to head.

### Fixing the Zipper of Jeans which is off the Track

After locating the gap in teeth place both side of zipper evenly from each side. Now the zipper is pulled along so that its track is placed in such a way that its track fills the gap easily. In case the zipper is torn it can be sewed with the needle at the damaged part. Sewing and stitching can be done until the zipper has been completed.
