C. .rpd

D. .rpx

20. Which of the following virtualization technologies lends itself the most toward CCNA Certification a scalable, buildable, easily modifiable enterprise that can support multiple different versions of the same application for various operating systems and user requirements?

A. Microsoft SoftGrid

B. Microsoft Virtual PC 2007

C. Microsoft Hyper-V

D. Microsoft Virtual Server

Answers to Review Questions

16. C, D. Terminal Services Gateway servers can interact directly with Group Policy to set policies as either enabled or enforced. When a policy is enabled, it is capable of being implemented throughout the environment. When a policy is enforced, it is required to be installed where the policy is in effect.

17. D. Microsoft SoftGrid Sequencer is the portion of SoftGrid that is responsible for proportioning the programs important resources and transporting them by ?sequencing?these parts of the application across the network to a given client station.

18. B. An Active Directory?integrated application is one that has access to the Active Directory database. An example of an Active Directory?integrated application is Exchange, which can send mail to and from clients based on the Windows Active Directory user information.

19. B. .rdp files are files created by an administrator that simplify the authentication process for users to access virtualized applications. A user can double-click an rdp file after the user has been set up by the administrator and be granted instant access to the application.

20. A. The greatest strength of Microsoft SoftGrid is its capability to be scaled almost end- lessly. From the ground up, Microsoft designed SoftGrid to be capable of handling multiple requests for the same resource files and application data. Additionally, SoftGrid can support multiple installs of the same program throughout the enterprise based on user needs and administrator requirements.
