New Generation Extended Batteries from Huawei and Samsung by [Markontrion](#)

Article published on May 15th 2012 | [Business](#)

Cell phones are said to be the unavoidable gadget of the humans in the contemporary world. The uses and scope of cell phones are extreme and the purposes are drastically changing. The new inventions in the IT are making considerable change in the mode of cell phone uses. If messaging was the early benefit, internet browsing is the modern benefit and it varies like so. According to the volume of uses and technological inferences, the phones are getting upgraded quickly. New models supporting sophisticated functions are making the mobile an invaluable product beyond its price factor. The consistent uses of the cell phones either for phone calls or gaming or other purposes, the overload function is making it more power consuming. The normal batteries supporting the normal use are not enough to back the latest functionalities of a smart phone. In this context, the necessity for introducing the extended batteries became more important. The new extended batteries which can give uninterrupted power will make the new generation phones most suitable to their configuration. There are various cell phone extended batteries available in the market. Among them, all are not giving great promises. But there are a few popular extended batteries with increased customer demands.

Extended Huawei Mercury M886 is an accepted internal battery which comes with 3000mAh, 3.7v power specifications. The first quality Lithium Ion cell with PCM Technology along with a replacement door is another important specification of this battery. The FCC approval granted battery proves itself to be a best quality one with proper standards. The ability to manage the large scale applications like MMS, Social Networking, Data Transfer, Social Media uses, GPS, Game Applications etc. are brilliantly supported by this battery. It is normally advised to charge the battery around 3 - 4 hours for obtaining the maximum capacity. From the Samsung products, Samsung Attain R920 Extended Battery is a different exceptional extended battery which has a cell capacity of 2900mAh with 3.7v. The Lithium Ion cells with PCM technology are also available here for ensuring the better performance. It comes with the Replacement door with the approval from FCC. The high end application capacity is again making this product much competent. The incredible power storage, durability, lasting energy etc. make these products a more demanded item. Here, you won't be worried about the normal overcharging accidents which happen to the normal batteries. The Dallas based OnTrion Battery Company is a prominent extended battery manufacturer and distributors in the US state of Texas. They are providing online shopping cart for their global customers to order their preferred items and to ship the same. They are using 100% recycled materials and trying to ensure the most customer satisfaction which makes them a professional mobile phone battery manufacturer in United States.
