Why You Must Leave Your Audio and Video Installation to the Pros by [Nolan Cortez](#)

Article published on August 16th 2012 | [Business](#)

Audio and video installation is a complicated affair. There exist few people in the world who are skilled enough to install an audio and video system on their own. In the real world of real people, audio and video install jobs should be left to the professionals. This is a rule with very few exceptions. Here's why.

It's complicated. You may be able to set up your own TV and DVD player. If you're skilled, you can even plug in and program your own DVR. Beyond that, things get complicated. When you introduce issues such as surround sound, lighting zones, communication interfaces, and whole-system integration, the complexity ramps up. Installation of such equipment requires a new level of training, knowledge, and even certification in order to make sense of it all.

Voltage and amperage levels need to be analyzed in order to properly set up the equipment. As you probably know, installation is more than a matter of plugging the right cables into the right spots. A/V installation usually involves a full understanding of the ins and outs of electrical usage within an entire facility. Handling electrical issues is an art of incredible precision. Unless you have specialized training, it's best to steer clear.

Improper installation can lead to unnecessary energy consumption and equipment failure. The last thing you want is to waste money on broken equipment due to a mistake in installation. Failure to properly install equipment can lead to unnecessary damages.

Chances are, you don't own all the necessary tools. You have a screwdriver. Maybe you even have several different types of screwdrivers. That's not going to cut it with the average audio and video install job. Installation pros own specialized tools that make the job possible. Do you have a full spline kit? Soldering iron? Coax compression assembly tool? If not, you'll need to call the professionals.

Once the system is installed, it needs to be professionally calibrated. Installation is only the first step to having a fully functioning audio and video system. Once the audio and video systems have been successfully installed, they must be calibrated for optimal use. This process alone is an esoteric practice that only professionals can perform.

You want a reliable audio and video system with no malfunctions and very little downtime. You want to save money on costs and upkeep. Now, what should you do about installation? Unless you are already trained and experienced in audio and video installation, it's best to leave this job to the professionals.
