Short codes and email SMS: the new tool to promote your business by Avena Sowell

Article published on December 30th 2011 | Communication

Companies around the world compete with each other in providing the best SMS Software to the Users. A company's software speaks highly about its qualities, and believes it that, this is possible only because the users also believe the same.

SMS Software is available for Desktop SMS, Android Application Development, MMS services, and Custom SMS Solutions. The company takes pride in calling itself a leader in SMSs meant for business purposes. The company works along with partner companies to provide value based services. The company provides wholesale rates for messages and all billing etc. is left to be carried out by the phone companies.

AMS alerts, business SMS, text messaging with API Servers, SMS sending through PC and Mobile are some of the services that an SMS service provider may offer. Here one can send bulk SMSs, Group SMSs or single ones. Text message software is available for Gateway providers, broadcasts can be made over a SMS server, and SMS is available via Emails. Software is compatible with all computers and text messages can be sent to phones through these computers.

A SMS Server that runs the messaging service offers facilities for both GSM and GRPS modem. Phone Modem is also compatible to SMS Software. A reliable company is a great option for quality SMS Software. It caters to all US carriers. The company believes that reliability in a company's services helps in maintaining good relationships and promoting business, and for this purpose, it works well with the known phone career companies in US and not all companies that might give a chance of a user's complaint. Uninterrupted services speak up for a great business.

Gateway services are made available with this software to send out SMS alerts. The software allows numbers to be stored for overall marketing improvement. Advertising strategy can be formulated and used with this particular software. The software allows for automatic inbound message responses. On organizations, personal software allows short codes of five or six digits to send and get messages with their very own personal number. This code is used for various purposes like the advertising and marketing.

SMS from email is best for companies where the employees have little access to internet. The product offered by the messaging company is simple and ready to use on being installed. No other software is required in this particular case.

No company comes without some kind of limitation. In addition, a particular company too has its own limitations. The short codes that the software offers is not very much appreciated by people who want to go for keyword campaigns. Apart from this the STOP and other message, which is of Help are generic in nature. SMS broadcast message is not possible in this case. One cannot rely upon the keyword words, as they might not appear when required. Setting up dedicated numbers is costly. It is difficult for a person to remember long codes. Special set up takes a lot of time to get off to work. CSCA gives these numbers. Carriers also charge more for dedicated numbers.
