Power access courses pack a punch for those in the relevant industries to be equipped with the right IPAF courses. These power packed courses can cover many aspects of the workflow to generate high quality work results.

There are many high power access programs offered by IPAF that meet industry standards and requirements. These also meet the necessary health and safety requirements as specified in the corresponding legislation.

MEWPS Course

The mobile elevating work platforms course is one of IPAF's power access programs that have over 90,000 delegates attending every year. It is conducted at over 500 training centers approved by IPAF in various locations across the globe for delegates' convenience.

The course was designed to help those involved with work at heights and who need to operate or handle access equipment.

Although this is just a one day course, much is taught to the candidates on the best practices, safety and health issues, operational techniques and types of machineries used in various industries.

Successful candidates would be awarded an IPAF certificate for completing this course. Candidates would also get a copy of the IPAF photo identification as well as a copy of the Operators' Safety Guide and PAL Card log book.

The certification and identity card are valid for 5 years before the candidate needs to undergo a refresher course.

This is the basic requirement by the local authorities with regards to work at heights environment for any personnel operating in that industry. Such power access course training would ensure that work is successfully conducted by competent people who have had the right training and equipped with the relevant technical knowledge.

This coveted IPAF power access qualification is widely accepted all over the world.

Qualified Trainers

It is important to be trained under qualified and approved trainers who have the IPAF accreditation. These trainers should also be experienced with various industries and equipment used at work at heights environment; hence, they would be able to relate their experiences to the learners to avoid mistakes and reduce risks or danger.

Qualified IPAF trainers would be able to conduct the IPAF power access programs accurately as they are aware of the scope of the course syllabus and they are familiar with the course requirements. They are always updated with the latest Health and Safety regulations by the authorities to give the latest information and regulations to the learners. They are also updated with the latest training methods to conduct these power access trainings.
