Get professional SMTP service to ensure smooth delivery of your mail by [Lee Rio](#)

Article published on January 23rd 2012 | [Email Marketing](#)

SMTP mail is the mail that is sent through Simple Mail Transfer Protocol. This protocol came into existence in 1982 when a method was needed to standardize the way emails were sent and received. Since its introduction the SMTP mail has been revised and updated over a number of times. But even then the basic way in which mails are sent has remained largely unchanged.

The smtp mail basically works on the basis of a text based protocol. Therefore it does not support the sending of a binary data. Even if this may sound a problem, there is one good thing about it. Because it is a text based protocol, you will find it easy to implement and maintain it. As a result it is considered to be dominant protocol when you are talking about sending mails or receiving the same on the internet. That is why it is very important for a network administrator to have excellent knowledge about the working of smtp service.

When you try to set up your own SMTP mail, you must keep in mind one thing i.e. you will be required to pass through many levels of authentication when the messages of your email gets delivered. If you have a dynamic Internet Protocol, then almost all your messages that you wish to send will be discarded. That is exactly why you will be required to test your Internet Protocol address.

The SMTP mail server software takes care of delivering the mail. But other problems will prevent you from sending the mail. Other than a dynamic IP address the problems may lie somewhere else. For example, the Internet Service Provider might blacklist your Internet Protocol address. It may think that your Internet Protocol address is creating lots of spams. This is usually the case if the email that you are sending exceeds the limit of bandwidth. This may also become the case if you are continuously sending the emails to a domain or email address that is not valid.

These problems can get on your nerves especially when you are dealing with important business transactions. You wouldn't want these problems to hamper your business. That is why it is better if you can take the help of professional companies that deal in SMTP service. That way you will find a professional solution to all your problems and you can also enjoy smooth sending of the emails to the recipients.
