SMTP relay server and email server SMTP will ensure smooth delivery of emails. by [Lee Rio](#)

Article published on January 23rd 2012 | [Email Marketing](#)

Contacting someone through emails is extremely popular given the easy access to the net facilities. And sending mails has been made easy with the help of an SMTP relay server. There are several advantages of using an SMTP relay server. These include an improve in the inbox delivery, reducing the amount of junk emails and also authentication of emails. But then you might also have to deal with several complications.

SMTP relay server allows you to send email messages by using the email service which exists. These act as post offices that will transfer your messages by relaying it. But then you might face troubles while using email server SMTP. The SMTP mail server software will bring before you a number of problems. You might find that that your mails are taking a lot more time to get delivered. The worst thing that can happen is that your email might not get delivered at all.

The bulk mails are controlled by the SMTP relay server. It will act as your main sending engine. This server plays a dominating role in deciding the authentication of the domains and also whether all the mails that you are sending will be successfully delivered or not.

If the SMTP relay server does not work properly then you might find that your inbox will get filled up with undelivered messages. And this problem becomes evident the moment you start sending bulk emails. A major reason behind this problem lies in an increase in the volume of the emails that are sent. Since the SMTP relay server is not adapted in handling the sending of bulk emails the matters turn out to be worse.

Leaving aside this problem there may be other technical glitches as well. The email server SMTP might even find it a problem in sending your emails to a particular domain. If this happens that means the problem lies elsewhere. For instance you need to check if your Internet Protocol has been black listed by the Internet Service Provider or not. You also need to be sure that your message that you wish to send as an email does not contain any explicit content. In that case the person whom you are sending the email might lodge a complaint about the content of your email.

If you are facing all these problems related to SMTP relay server then make sure that you get help from those who deal in professional SMTP services.
