Article published on May 2nd 2012 | Hardware

There is one thing that most of us throw quickly and do not think of recycling and that is the cartridges of our printer. Even though, people are recycling the old newspapers, plastic bottles and aluminum cans, most of them do not even know that printer cartridges can be recycled. Now, the question that would be arising in our mind is how can recycling of cartridges help? Here is the answer for the same:

Whenever an ink cartridge is thrown into a landfill, it is capable of taking 450 years to decompose and with a view to make the environment safe, 166.2 millions of ink and print cartridges and toner cartridges were recycled. But, still people are throwing away their cartridges and according to an estimate around 300 million cartridges end up in landfills each year and around eight cartridges are being thrown away every second in the United states alone. Recycling of cartridges helps in saving of animal habitats and natural resources and it also reduces the amount of trash produced. Above all, it generates less water and air pollution and consumes less energy as compared to using virgin materials. Recycling in a big picture enables to slow down the building-up of greenhouse gases by saving energy and brings down the pollutants that are capable of contributing to acid rain.

Therefore, the best way to save the environment is to reuse the ink cartridges rather than throwing them away. There are companies offering refilling services for cartridges irrespective of the type. Rather than purchasing recyclable cartridges, it is better to go for refillable ink and print cartridges. Refilling rather than throwing them away can enable users to show their gesture to the planet. These days, for helping out people to purchase refillable cartridges at the comfort of their home, there are websites offering this service online.

These online stores sell brand new inkjet, compatible laser cartridges and they also offer the service of refilling of popular brands of cartridges like Lexmark, HP, Canon and Epson Inkjet Printers. In addition to these brands, they also have several brand cartridges and even these websites offer technical support online for any problems pertaining to printers and they have forum for ink/toner cartridges wherein users can get their doubts clarified.

Protection to environment can bring about great benefits to the future citizens and keeping this in mind it is better to go for refillable cartridges and in the case of cartridges that cannot be refilled, it is better to recycle them rather than throwing away.
