The New Item for Face Collections Functions Efficient Keratin and Wakame Extract
by [Tedd Woods](#)

Article published on April 26th 2012 | [Health](#)

Every time you turn around there seems to be a new item for collections being presented, complete with fresh statements that it is the most modern anti-aging system ever designed. The truth is that the more recent items you see a particular company put out are likely not very much different from the last ones they revealed. If their last item never reduce your facial lines, then it is a pretty safe bet this new one will too.

If you look at many the anti-aging healthy epidermis treatment treatments on the market you will notice that they are designed around the assumption that all you really need to do in order to increase the overall look of your epidermis is apply some pet tissue to it. These are the items that seek to solution your problems by treating a serving of bovine collagen, elastin, and acidity hyaluronic into your epidermis.

Each new item for collections that functions bovine collagen, elastin, or acidity hyaluronic is stated to be somehow more modern than the last, but they all have one key function that assures that they will fall short. That is the fact that the three primary substances cannot be consumed by your epidermis. Collagen, elastin, and acidity hyaluronic are all too molecularly packed to make ingesting them possible.

These treatments are generally of poor quality in other ways as well. The base of this form of makeup system is substance synthetics, and these artificial substances provide very little benefit to your epidermis when compared to the advantages you can achieve with all organic substances. Synthetics typically provide only minute amounts of the anti-oxidants and nutritional value necessary to help your epidermis look younger.

One form of new item for collections that I would highly counsel you to stay away from is the anti aging removal that function Botox treatments solutions. These substances are designed to "freeze" or "relax" the muscle tissue that control your face movement, so that collections around the mouth, eyes, and temple are not deteriorated. These treatments sleek your facial lines by producing the face muscle tissue to drop, which draws your epidermis away from the point of the wrinkles.

The terms "freeze" and "relax" are used instead of the word that represents what these alternative substances really do, which is relax. You may think that paralyzing your face muscle tissue by using these treatments is good because the effect is only short-term, and because it is a means too an end. Recurring use of items presenting these substances can possibly lead to a lasting state of paralysis in one or more of your face muscle tissue.

The most secure and most effective new item for collections functions a variety of Efficient Keratin, and Phytessence Wakame algae create. Efficient Keratin is a couple of keratin protein proven to greatly increase the organic development of bovine collagen and elastin. Phytessence Wakame increases your overall look by avoiding the malfunction of acidity hyaluronic.

This new item for collections presenting Efficient Keratin and Phytessence Wakame is 100% all organic, and is without a doubt the best option available for removing the facial lines in your epidermis.
