The Injection Molding Industry- an Insight by [Julia Roger](#)

Article published on December 9th 2011 | [Home Business](#)

Injection molding is used in both plastic and metal to make articles of different shapes and sizes and it has a wide use in all sort of industries. The process involves a lot of step and the process was developed in 1872 for the purpose of making things. Now this is a high profit industry where many plastic molds are made through this process. The amount is nearly 30% a year.

The injection molding is performed by different companies at a whole sale basis. There are lots of companies in this field. It is very much required to keep with the current trend when it comes to sustaining in a specific industry and the same is applicable for this industry too. A world class injection molding companies is required to perform all sort of tasks that complete the process such as injection molding, injection tooling, finishing and assembly. These all together completes the process. This requires a good set up and real estate needs that can be good for setting up these companies. The machineries are advanced and can carry out the in-house operations.

There are some companies which specialize in specific parts of injection molding. One company will take up the responsibility of injection tooling which the other fishing and assembly and then the work can be outsourced for injection molding. This is a chain of work that needs to be done in proper order to make sense. This may be a bit costly for the cost of transportation but this cannot be avoided as the operation is difficult to carry out under a single roof. When you are the end user you need to contact a molding company and your need is served.
