Benefits of wood fireplaces by [Glyn Jones](#)

Article published on August 21st 2012 | [Home Improvement](#)

Winter in UK can be so cruel. It gives you with dry hair, dried-out skin, stuffy nose leave you shivering. Wood burning fireplaces and wood stoves in homes and offices may help ease the problems the winter season brings. Electric heating in these modern ages is extremely popular, however the traditional wood burning fireplaces and wood stoves beat electric heaters with regards to efficiency. For starters, electric heaters leave you with a higher electricity bill. For an additional, wood burning fireplaces and wood stoves are dependable when the power trips; electric heaters just aren't.

If the office or home isn't yet equipped with a heating system, here are a few information regarding wood burning fireplaces and wood stoves so that you can ponder:

Wood burning fireplaces are to give centralized heating, as wood stoves are to space heating. Wood burning fireplaces distribute warmth throughout home via a system of ducts. Wood stoves provide heat right to a space. Modern wood stoves have high-BTU models that some are capable of heating a whole home, just as long as it is positioned in a focal area.

Wood fireplaces and wood stoves are equally modern and primitive. Way before electricity was invented, ancient people cooked food directly within the fire. Wood burning fireplaces and wood stoves are cost-efficient cooking implements because you can heat your space and cook your meals at the same time. Plus, wood burning fireplaces and wood stoves never require electricity to operate.

People frowned on wood fireplaces and stoves in the early years before Environmental Protection Agency set a criteria for fireplace companies within the late 1980s. The regulation requires all wood burning fireplaces and wood stoves to generate a clean burn that does not harm the environment and also the people. The top emission rate of particulate matter drastically took place to 7.5 grams hourly. Wood burning fireplaces and wood stoves use wood, a renewable supply of energy, to heat a home. Although trees work extremely well, reforestation programs require planting of trees to exchange the chopped ones. Compared with gas stoves designed to use fossil fuel, a nonrenewable source of energy, wood fireplaces and stoves will be more environmentally friendly.

Nobody undermines the practicality of propane fireplaces because they are, indeed, the easiest way of getting started through the cold season. However, the ambience that wood burning stone fireplaces and wood stoves can't be beat by any other high-technology fireplaces and stoves. Gas fireplaces could be simpler to operate, maintain and clean but they're not capable of giving that authentic fireplace believe only wood burning fireplaces and wood stoves can give. You are like put within a magic spell while you sit as you're watching warm fireplace, watch the tongues of flame flicker and dance against the darkness, hear the logs crackle when the fire rages and smell the aroma of the wood burning. Gas fireplaces may be outselling wood burning marble fireplaces before year or two, but wood fireplaces will invariably live as the legendary favorite.
