Electric Underfloor Heating Points to Remember While Installing the System by [Julia Roger](#)

Article published on June 5th 2012 | [Home Improvement](#)

You would find Electric Underfloor Heating system installed in almost every household. The basic reason is that it is quite affordable- both in terms of installation cost and electricity consumption. The purpose that it fulfills and the advantages that people gain from using the system are attracting people to use it, especially in the countries where the winters are severe or the climate is cold throughout. It is important that you take care of certain things before you install the system as you might face severe problem, even hazardous accidents due to negligence.

Firstly, check out the floor for any kind of water seepage. This is generally a problem in old houses, where floors and walls get damp by water leakage from unknown sources. Renovate all such areas before you install the heating system. Otherwise, the water might be exposed to the electric wires present under the floor resulting in short circuit and might just start a fire. You may not be able to do the inspection on your own. Thus, it is better to call in an expert to check whether everything is fine or not and accordingly take further action.

Secondly, use quality wire meshes. Moreover, use them as per the requirement of heat since some get heated quickly while other take some time to heat up. Quality wires should be used to ensure that they does not melt away or corrode away under the flood due to extreme condition and you end up installing the system all over again. Thirdly, ensure that the floor is covered properly with cement coating so that nobody is exposed to the live wires. Choose an experienced and reputed Floor Heating Melbourne agency if you are a citizen of Melbourne to install the system properly to ensure safety in all aspects.
