Getting to Know Your Plumber: How a Plumber Spends a Day at Work by [Bibi Karpel](#)

Article published on June 8th 2012 | [Home Improvement](#)

Basic utilities like water and gas are passed out into residences through networks of large pipes. On the other hand, smaller pipes function to distribute these utilities to different rooms where they are needed and to transfer sewage into septic tanks or public sewers. Together, these pipes are called plumbing and their network encompassing other devices used for distribution control is called a plumbing system.

Plumbing was derived from the word "plumbum," the latin word for lead. Before lead was excluded from being used as a main material for producing pipes and accessories of industrial and residential pipeline systems because of health concerns, nearly all types of pipes were constructed from lead. This gave professionals who manage pipe maintenance and repair the tag "plumber," originally "lead workers." Even though today's pipelines hardly are composed of lead, the term "plumbing" is still acknowledged to regard all sorts of work that consist of pipes.

The job of a plumber is not narrowed to repair and maintenance. Regularly in a construction project, the proficiency of a plumber is necessary in setting up pipes and fixtures, including making certain that they will work effectively for a long time. The functionality of utility distribution in a home significantly depends on the performance of a plumber.

Specifically, plumbers in most parts of the world are needed to learn how to interpret drawings or floor plans, to evaluate, cut, bend, and thread pipes, and to build plumbing equipment and fixtures. They are instructed to meet legal and structure statutes and security standards the same as other engineers in a construction site. Although no federal law launches licenses for plumbers, each state is given the title to create its own presentations for licensing and taxing.

A plumber often works in tandem with an electrician, whose job encompasses wires and circuitries. There may even be occasions when the scope of their services would lap over. Some specialists in plumbing Coral Springs FL and other prominent cities suggest are accredited to handle major components of heating and cooling systems, which is originally the duty of a licensed electrical, mechanical, or air-condition engineer. This is due to their expertise in handling with gas line for heating and cooking.

Typically, a plumber can be called in to correct leaky faucets, unclog toilets and replace old pipes. It is crucial to call a Coral Springs plumbing professional to replace pipes that are beginning to deteriorate. Rusty pipes are a main cause of illnesses especially when they are used for taking water into the house.
