Tips to buy Indian Stock Images on Cheaper price with Good quality by [Reetika](#)

Article published on August 23rd 2012 | [Photography](#)

There are many ways to buy Indian stock images at a cheaper price and that too good quality images. Certain things that one needs to keep in mind while selecting an image are:

## 1 Selecting Image Size

Image sizes typically range from an extra small size to an XXlarge. The size you'll need really depends on what you intend to use it on. If you're looking to add images to your website, eBook, newsletter or other online media then you will rarely need a size larger. If you're looking to download an image for print then you'll want to consider your end use that whether you want business stock images or any other. One thing to remember, the larger the original image is the better quality it will be when making changes to it.

## 2 Determining Image quality

Determining image quality leans slightly on the complex side for those of us unfamiliar with the digital photo industry. When you were to ask an experienced photographer they will tell you to look for resolution and dpi, whatever those are! But there is a way for the rest of us to determine image quality.

First, view the image in the full size that one plans to purchase. This is typically done by clicking on the image itself. If it's clear and smooth in appearance one can mark it as a quality image. Another excellent way to know if images are of good quality would be to read the reviews. A website that has a consistent record of positive reviews is a safe bet on a good image.

## 3 Finding the Best Place to Buy Images

When considering where to buy the images from one needs to do some homework. With so many options out there one is at a higher risk of getting photos of low quality or no quality at all for that matter. When evaluating websites here are a few things to keep in mind:

â€¢ Copyright - generally speaking you are looking for royalty free photos here. You don't want to get caught up in too many copyright restrictions when using images, though some restrictions are expected at times.

â€¢ Variety - a quality site should provide you with a large selection to choose from

â€¢ Pricing options - top sites usually offer multiple pricing options from a single image to package deals with an overall average price of about \$2 per image (smaller size). If you start seeing prices over \$3 per image for these small sizes move on!

â€¢ Customer support - if you can't reach them, don't buy from them!

â€¢ Satisfaction guarantee - a site offering high quality photos will be proud to offer some form of satisfaction guarantee even if it's only to refund your money for a corrupted download.

â€¢ Read the fine print - tedious but necessary, those long terms of use can sometimes include catches in your use agreement.

â€¢ Become a repeat customer - once you've found a site you like bookmark for future use. Why go through all the hassle of evaluating another site later on when you've found one that has all you're looking for.

Perhaps the most important tip I can give you is this; when you're ready to buy stock photos online don't go at it in the dark. Familiarize yourself with the different sizes and their uses. Choose a handful of popular stock websites and compare their prices and package discounts so you'll know if the pricing you find is fair.

Finally, understand the current copyright laws so these cheap webmasters can't scam you into paying full price for limited use. By sticking to these tips you'll be armed and ready when it comes time to buy.

Top 10 websites to get royalty-free images or images at cheaper rate, which can certainly help you getting amazing images include:

### 1. GettyImage
