Solar Wireless Camera

The Solar Camera offers a new form factor for wireless solar IP video security cameras, whereby small the battery life is five days without a recharge, providing for adequate power in most environmental scenarios.

Fully self-contained wireless Video Camera: Traditional video surveillance cameras have been limited in their range of installation by the infrastructure required to support operation. The Rugged-I is a fully-contained, Solar-power wireless outdoor video camera which allows for placement practically anywhere because it is not constrained by wires or cables. The Micro Power Wireless architecture was designed from the ground up to overcome reliability and video quality issues typical of standard wireless IP camera designs and to operate efficiently under congested wireless environments. These features result in significantly lower installation and acquisition costs over solutions that require trenching or large external solar panels.

Rapid Deployment:

Rapid setup and immediate network deployment of the MiniHub and associated cameras gives security organizations and professionals a powerful weapon to combat threats and crime. The MiniHub can be place inside a structure with internal or external antennas or can be mounted outside with optional NEMA-rated hardware. Whether called upon to secure public events. Protect a property's perimeter or to provide video situational awareness. The MiniHub wireless video hub is the right assets for the mission.

Traffic Monitoring

Traffic Monitoring, controlling and managing traffic or vehicle fleets is critical to a successful transportation operation, for both public and commercial enterprises. Your organization may be responsible for law enforcement and must track public and government-issued vehicles as part of your crime reduction efforts. You may need to track vehicles, manage on-site car parking spaces, and warehouse traffic in real-time. To keep your wheel on the road, you need solution tailored to your specific transportation and traffic challenges.

SafeCity Solution

Safe city-Solutions is having OEM agreements with many leading technology manufacturer where we combine their innovative technologies with other components to offer completely new solution to address market demands. Our expertise is in many security areas where many vendors fail to offer a complete security solution to their end users. We accept all technical challenges to deliver trusted tested and cost effective technologies with implementation support.

Long Range, Thermal Camera

These Thermal Cameras are integrated with the special Long Range Capability, with variable range from 1km to 15km long.

Face Pass

Face Pass Tech is a leading security system manufacturer and provider for critical infrastructure, airports, seaports, oil and gas, financial, industrial and commercial security market, Face Pass Tech is trusted by some of the most prominent names in biometric and CCTV industry. Our Comprehensive portfolio of the products has contributed to the security of many sites around the world.

Megapixel High Definition CCTV

Sentry360 is a leading developer and manufacturer of application driven multi-megapixel surveillance cameras and video management software for commercial and government markets. Founded in 2004, Sentry360 has been through the struggles of the evolution of IP Video in the security industry and the many challenges the early years presented in evangelizing a new concept in the industry.

Police CCTV

Total System Solution, Central Management System, Playback Analysis System, Remote Management System, Three Types for Map Showing, Central Management System, List of Fleet Vehicle Status (Online/ Offline), Vehicle Location, Live view, max 16 screens, Speed and Sensor Status
