The Way to Handle the Enterprise Using a Blackberry Cellular Phone by [Kelly Brueggemann](#)

Article published on July 18th 2012 | [Technology](#)

A handful of firms depend on protected and handy mobile business innovations including the Blackberry Enterprise Server. Ever since its inception, BB Enterprise Server continues to grow in terms of expandability, functionality, and on capabilities. It has been used by every type of company, from the smallest businesses to the biggest conglomerates.

The first BB cellphones happened to be corporate mobile phones which allowed employees to get their e-mail on the field instantly. The BB phone's framework is somewhat simple. The BES is set up following your company's requirement. Once you are subscribed for the Blackberry Enterprise Server, you may view info privy to the enterprise. You'll be able to talk with the colleagues as well, by a heavily secure intranet.

## How BES works

After you activate the power, an authorized cellular number quickly signs in to the system. Once a host detects that the Blackberry is activated, it may pass your firm's operation catalogs to your phone. The service catalogs are similar to electronic facilitators which tell your Blackberry what to complete and how to interact with similar appliances.

Your company BES may even start installing encrypted shields to every BB mobile phone linked to it. Setting up security may make sure that any data sent on the network is secure. A Blackberry Enterprise System is always functioning to ensure that data runs securely and properly between the server and the Blackberry gadgets subscribed to it.

## Functions

BES provides a different set of functions for both end users and managers. In the case of administrators, they can control what the end users may access from the corporate server. They may even restrict whatever amenities the manager does not need the staff to use including surfing the Internet, Short Messaging Service or Multimedia Messaging Service functions. Equally, you will be the person managing what server CALs the users can employ.

In the matter of Blackberry Enterprise Software end users, they could set up meetings, visit websites, and retrieve pdfs using your BB. Personal Information Management capabilities enable the user to update your calendar, address book, notes, and tasks to keep you consistently updated. It is also a possibility to synchronize the Blackberry mailbox with your PC's inbox. You can argue that such features can be done with any type of cellular phone or enterprise server software ; but using BES, you will be guaranteed that data you transmit is protected and stable.

It is not only big firms that relish in the advantages of BES. Small-scale businesses everywhere can invest in Blackberry Enterprise Server Small Business Edition, which is simply Blackberry Enterprise Software in a smaller degree.
